CHAPTER FL

DRILLING FLUIDS/CIRCULATING SYSTEM/DRILLING AND COMPLETIONS

Contents

Introduction FL-1
Drilling fluid function and performance FL-1
Physical operating principles FL-2
Testing drilling fluid properties FL-2
Purpose of testing FL-2
Density or mud weight FL-2
Viscosity FL-2
Gel strengths FL-4
Filtration or fluid loss FL-4
Sand content FL-5
Solids, oil and water content FL-5
Chemical content FL-5
Importance of the drilling fluid FL-5
General rig personnel involved FL-5
Categories of drilling fluids FL-5
Pneumatic drilling fluids FL-7
Dry gas FL-7
Mist FL-8
Foam FL-8
Aerated fluids FL-8
Water-based fluids (aqueous fluids) FL-8
Water or brine FL-8
Spud mud FL-8
Native muds FL-8
Low-solids systems FL-9
Low-solids/non-dispersed system FL-9
Polymer muds FL-9
Lightly treated muds FL-9
Flocculated bentonite systems FL-9
Dispersed muds FL-9
Seawater or brackish water FL-9
Saturated salt FL-9
Inhibitive drilling fluid systems FL-10
Potassium chloride (KCl) polymer FL-10
KCl polyglycol FL-10
Polyamine systems FL-10
Calcium systems FL-10
Silicate systems FL-10
Encapsulating polymer systems FL-10
High-performance water-based muds (HPWBM) FL-10
High-temperature (HT), high-temperature/ high-pressure (HTHP) and ultra-HTHP systems FL-11
Non-aqueous-based mud systems (oil-based) FL-11
Invert emulsions FL-11
Calcium soap systems FL-12
Surfactant emulsifier systems FL-12
Low-clay, flat rheology systems FL-12
Relaxed fluid-loss systems FL-12
All oil systems FL-12
Special application fluids FL-12
Completion brines FL-12
Drill-in fluids FL-12
Other special application fluids FL-12
Additives FL-12
Weight materials FL-13
Viscosifiers FL-13
Filtration control additives (fluid-loss control additives) FL-13
Thinners (deflocculants) FL-13
pH/alkalinity control chemicals FL-13
Calcium removers FL-13
Surfactants and emulsifiers FL-13
Shale inhibitors FL-14
Corrosion inhibitors/scavengers/ biocides FL-14
Lubricants FL-14
Defoamers FL-14
Flocculants FL-14
Temperature stability agents FL-15
Foaming agents FL-15
Hydrate supperssants FL-15
LCM/bridging agents FL-15
Location on a rig site FL-15
Installation FL-16
Safety and handling FL-16
Proper handling for safety FL16-
Fire hazards and zones FL-16
Chemical hazards FL-17
Hydrogen sulfide (H2S) FL-17
Carbon dioxide (CO2) FL-17
Carbon monoxide (CO) FL-17

Lime FL-17
Caustic (sodium hydroxide or NaOH) and caustic potash (Potassium hydroxide or KOH) FL-18
OBM surfactants FL-18
Physical hazards FL-18
Heat FL-18
Sack cutting FL-18
Cranes FL-18
Noise FL-19
Pits and walkways FL-19
Closed-vessel entry FL-19
Tank strength FL-19
Spills FL-19
Lifting FL-19
Waste disposal FL-19
Pressure washing/rig cleaning FL-19
Use of icons/colors/risk factors to visually denote danger FL-19
System maintenance and contamination treatments FL-20
General maintenance of drilling fluid properties FL-20
Density (mud weight) FL-20
Rheology increase FL-20
Rheology decrease FL-20
API and HTHP fluid loss FL-20
Salinity FL-20
Alkalinity (pH control) FL-20
Total hardness/excess lime content FL-21
Sand content FL-21
Solids, water and oil content FL-21
Methylene blue test FL-21
Electrical stability FL-21
Contamination treatment for drilling fluids FL-21
Potential problems that can affect mud systems FL-21
Weight material settling or sag FL-21
Sag or settling treatment and prevention recommendations FL-21
Static settling FL-21
Dynamic settling FL-25
Bed slumping FL-25
Corrosion FL-25
General treatment procedures FL-25
Dissolved oxygen FL-25
Acid gases (CO2 and H2S) FL-25
Bacterial degradation FL-25
Gas hydrates FL-25
Prevention and mitigation recommendations when drilling with a riser FL-26
WBMs FL-26
NAFs FL-26
Well operations FL-26
Deepwater riser issues FL-26
Hole cleaning FL-26
Rheology effects FL-26
Balling with WBM FL-26
Stuck pipe FL-26
Treatments FL-26
Lost circulation FL-27
Salt formations and rubble zones FL-27
Treatments FL-27
HTHP conditions FL-28
Wellbore stability issues FL-28
Calculations and tables FL-29
Brine tables FL-29
Important calculations FL-29
Volume of mud in the circulating system FL-29
Surface system volume calculations FL-29
Rectangular tank volume FL-29
Upright cylindrical tank volume FL-31
Hole volume calculations (pipe in hole) FL-31
Annular volume (or pipe displacement) FL-31
Pipe (or hole) capacity FL-31
Circulation times and strokes FL-31
Pump output and circulation rate FL-31
Triplex mud pumps FL-31
Duplex mud pumps FL-32
Mud cycle (complete circulation of active system) FL-32
Bottoms up (bit to surface) FL-32
Surface to bit (pipe capacity displacement) FL-32
Hole cycle time FL-33
Hole volume (pipe out of hole) FL-33
Hydrostatic pressure and hydrostatic gradient FL-34
Quantities of mud materials FL-35
Weight-up formula FL-35
Volume increase due to material additions FL-35
Dilution and blending FL-35
Annular velocity FL-36
Government regulations FL-40
Health and safety regulations FL-40
Environmental regulations FL-41
Transportation regulations FL-43
Cited references FL-44
Additional references FL-45
Appendix: Safety data sheets, hazard labels & NFPA Diamond FL-A1
