SafeGulf Overview Hosted by: IADC

September 25, 2007

Owner Client Endorsement: ISNetwork Selected as SafeGulf Database

Operator Endorsement:
June 1, 2004

SafeGulf Communication

Gulf of Mexico Contractors Working with BP, ChevronTexaco, Shell or ExxonMobil:

The SafeGulf Advisory committee has selected ISN Software's online compliance database, ISNetwork (www.isnetwork.com), as the method for verifying an individual's SafeGulf credentials. All SafeGulf Accredited Training Centers will directly link SafeGulf training records into ISNetwork. Any employee going offshore will have his/her credentials verified at BP, ChevronTexaco, Shell, and/or ExxonMobil shore locations through ISNetwork. SafeGulf credentials are consistent, minimum Health, Safety and Environmental (HSE) training requirements for the contractor community.

Effective January 1, 2006, all contractors must fulfill the SafeGulf minimum HSE training requirements prior to working on operator premises in the Gulf of Mexico. Details on database management are still being developed but the key elements are:

- All contractors must provide verification of minimum training as described under SafeGulf (additional specialized skills training may still be necessary) effective January 1st, 2006.

Database Issues

- ISNetwork will manage the SafeGulf database at no additional cost to data providers. A data provider is any third party SafeGulf Accredited Training Center. Training centers can be accredited through PEC/Premier, IADC, or ASC.
- For contractors that have accredited in-house training and ARE NOT currently members of ISNetwork, there are three options, subscribe to ISNetwork, enter training records through an Accredited Training Center, or enter your employee data through access provided by an approved organization such as ASC, IADC or PEC/Premier
- GNOIEC, IADC or PEC/Premier

Verification Issues

- For current ISNetwork users, individual companies may choose to receive an ISN picture ID card compatible with SafeGulf for their employees at no additional cost. Or, they may choose the non-ISNetwork user option listed below.
- For non-ISNetwork users, an identification medium such as a barcode will be provided by your accredited training center as per ISNetwork protocols.

SafeGulf Records

These are the only organizations allowed to provide verified SafeGulf qualifications to ISNetworld. All other Training Providers must submit data back to the accrediting organization. The accrediting organization will submit the qualifications to ISNetworld. Qualifications are communicated and imported into ISNetworld on a daily basis.

ISNetworld Total SafeGulf Records as of September 24, 2007: 124,797
