ALERT 05 – 47

## ELEVATOR LINK-TILT INCIDENT

### WHAT HAPPENED:

The Drill crew was preparing to pick up a pup-joint from the mouse hole. A Floorhand was positioned behind the pup-joint to latch the elevators. The link-tilt was engaged with a rope for full extension. The Driller, who engaged the link-tilt and, thinking the elevators were latched, disengaged it. Meanwhile, the Floorhand trying to latch the elevators followed them back when they were disengaged until his chest came to rest on the pup-joint. The pup-joint was spinning a little so the Floorhand grabbed the pup-joint to regain his balance. The Driller realized that the elevators did not latch so he re-engaged the link-tilt. As he did, he turned to face the mouse hole and saw the Floorhand holding the pup-joint - but it was too late. The elevators caught his left index finger and his right little finger. He suffered a partial amputation to his index finger and a laceration to the little finger that required 3 sutures.

### WHAT CAUSED IT:

The Driller had no indication whether the elevators were latched or not. He should have waited for confirmation. Also he should not have re-engaged the link-tilt until he had notified all personnel in the area and had confirmation that it was clear to do so.

The Floorhand should not have followed the elevators when the link-tilt was disengaged. He should have let go and notified the Driller that they were not latched and moved to a Safe area.

**CORRECTIVE ACTIONS:** To address this incident, this company issued the following action items:

### Action Items

- Revise the JSA to include the hazards involved with the link-tilt.
- Notify personnel before the link-tilt is engaged
- Do not disengage the link-tilt until notified that the elevators are latched
- Do not re-engage the link-tilt until personnel have been notified
- Do not assume what you can't see, maintain good communications at all times

---

**The Corrective Actions stated in this alert are one company's attempts to address the incident, and do not necessarily reflect the position of IADC or the IADC HSE Committee.**
