CHAPTER MP

MANAGED PRESSURE, UNDERBALANCED
AND AIR/GAS/MIST/FOAM DRILLING

Contents

Introduction ........................................... MP-1
Air, gas, mist and foam drilling .................. MP-2
Underbalanced drilling ............................. MP-3
Managed pressure drilling ........................ MP-3
Variations of managed pressure drilling ........ MP-3
Deepwater applications of MPD .................. MP-5
IADC UBO/MPD committee
Technical support .................................... MP-5
Key enabling equipment ............................ MP-5
Managed pressure drilling ........................ MP-5
Continuous circulating devices ................... MP-7
Constant bottomhole pressure ..................... MP-7
Constant bottomhole pressure/bottle-up (or trapped) pressure ............... MP-7
Constant bottomhole pressure/back-pressure control ........................ MP-8
Dual-gradient drilling ............................... MP-8
Dual-gradient subsea pump ........................ MP-8
Controlled annular mud level ...................... MP-8
Mud line pumping (Riserless) ..................... MP-9
Dual-gradient/mix fluid using gas ................. MP-9
Dual-gradient/mix fluid using liquid ............. MP-9
Mud cap drilling ..................................... MP-10
Floating mud cap drilling .......................... MP-10
Pressurized mud cap drilling ...................... MP-10
Other MPD techniques ............................. MP-10
RCD only ............................................ MP-10
Enhanced kick/loss detection only ............... MP-10
Constant bottomhole pressure/back-pressure control using gas injection ...... MP-11
Equivalent circulating density
Reduction tools ...................................... MP-11
ECD control: Concentric drill pipe .............. MP-11
Common MPD equipment components ......... MP-11
Rotating control devices ........................... MP-11
Returns flow path .................................. MP-11
Chokes/manifolds .................................. MP-11
Flow meters ......................................... MP-12
Auxiliary pumps .................................... MP-12
Gas busters/separators ............................ MP-12
Drill string float valves ............................ MP-12
Underbalanced drilling ............................ MP-12
Introduction ........................................ MP-12
Why drill underbalanced? ......................... MP-13
Designing and planning an underbalanced drilling well ................... MP-13
Impact of UBD operations on regular rig personnel ......................... MP-14
Rotating control devices .......................... MP-14
Drill string non-return valves (NRVs or floats) .................. MP-15
References ......................................... MP-15
Air/gas/mist drilling ............................... MP-15
Why drill with air/mist? ........................... MP-16
Typical air drilling problems ...................... MP-17
Wet hole .......................................... MP-17
Mud rings .......................................... MP-17
Key seat and dropped pipe ....................... MP-17
Downhole fire ....................................... MP-17
Shale, oil shale, gilsonite, coal and other common formation problems .... MP-17
Air volume requirements ........................ MP-18
Mist drilling rules .................................. MP-18
Corrosion problems and solutions ............... MP-18
Drying a wet hole .................................. MP-18
Foam drilling ....................................... MP-19
Introduction ........................................ MP-19
The history of foam ................................ MP-19
Foam, mist and in between ....................... MP-19
The advantages of foam .......................... MP-19
Typical foam drilling problems ................. MP-20
Gas volume fraction .............................. MP-20
Water volume (liquid volume) .................... MP-21
Gas volume ........................................ MP-21
Corrosion issues ................................... MP-21
Operational considerations ...................... MP-21
One-pass system ................................... MP-21
Recycle foam ...................................... MP-21
Air hammer drilling ............................... MP-21
Limits to the air hammer ........................ MP-22
Air/gas directional drilling ....................... MP-22
Primary equipment for foam gas drilling .... MP-22
Surface air lines and the blooie or flow line .................. MP-23
Blooie or flow line ................................ MP-23
Sample catching .................................... MP-23
Airline manifold .................................... MP-23
References ......................................... MP-23
