

**INTERNATIONAL ASSOCIATION OF DRILLING CONTRACTORS  
SOUTH EAST ASIA CHAPTER  
HSE COMMITTEE**

**HSE Committee meeting**

**Friday 3 Feb 2017, 10.30-11.30**

**Location: Frigstad Offshore, Singapore.**

Participants:

Bo Johansen, Maersk Drilling

Mark Greenhow, Frigstad offshore

David Mugridge, OES group

Benito Alexander, SK Drilling (on the phone)

**Agenda**

1. Guidance notes finalisation
2. Update from IOGP Meeting London
3. Future of HSE committee
4. IADC related matters
5. Next meeting

**Welcome**

Chairman welcomed to the meeting, after arriving slightly late.. and noted a small but rather elite group were present.

**Welcome to new member**

David Mugridge, Business development manager from OES group has joined the group. A warm welcome.

### **Guidance notes update**

The Spills and the Drug and Alcohol testing guidance notes were confirmed ready to go to IADC for further processing.

Bo will contact Chit to establish how to move forward.

It was discussed that perhaps the Drug and alcohol paper was to be a guidance note, where the spills should perhaps become a standard.

### **IOGP Meeting update**

Bo attended a IOGP meeting in London on behalf of Maersk Drilling and somewhat on behalf of IADC.

The meeting was to clarify the contents and the intent of a new IOGP Standard “423 HSE management guidelines for working together in a contract environment”, a implementation meeting.

The intent of 423 is to attempt to standardize the work carried out between oil companies, contractors and sub contractors in a contract environment. This includes capability assessments, questionnaires, audits, evaluations etc.

The intent is really really good, as we all spend much time of replying to questionnaires from clients.

There will be an official set of minutes at some point, here are Bo’s comments from the meeting:

*It is expected that the guidance note will be published by IOGP no later than 1 April this year.*

*There were no changes made to the document.*

*The purpose of the meeting was to get an understanding of how different stakeholders viewed the document, and the thought behind the document, and to clarify how to move forward.*

*There were a couple of drilling contractors present, our collective feedback to the operators was that*

- 1. we would appreciate the uniform approach that is the intent of the document*
- 2. we had little faith that it would actually become the standard and norm ACROSS the operators*

3. *we would also appreciate if the operators became better at accepting audits carried out by other operators, as well as official 3rd party audit vendors.*

*From the operators we heard that*

1. *Shell has an intention to be utilizing 80% industry standards as their standards by 2020 (opposed to roughly 20% today).*
2. *Statoil is already using the contents of the 423 in their vendor vetting*
3. *Exxon and Chevron do not feel like moving towards 423 at the moment, as they do not feel that they have the resources to “change their management system and supply change management at this time”*
4. *Some minor operators will definitely be looking to 423, as it is a help for them*

*The outcome of the meeting was a few action items such as*

1. *Operators to compare existing tender questionnaires to see how many “quick wins” are available in terms of almost identical questions that just as well could be identical*
2. *Trial run of using the 423 as the common standard in Norway*
3. *Setting up a website with easy access to the information in 423 in a more user friendly format than a 160 pages document (i.e. somewhat similar to wiki)*

### **Future of HSE Committee**

Chairman summarized the grim situation ahead.

We know that Bo is leaving at the latest end June (Varun is poised to remain as member), we know that Mark is leaving around May

To our knowledge there are close to no drilling contractors left in Singapore.

We thereby know that a ***new chairman will be needed*** when we get to mid-year at the latest. David mentioned that at least from his perspective he was looking at staying in Singapore for at least another 1½ yrs.

In terms of projects to work on, there was a general consensus that DROPS would be a good topic to push further.

Joachim has previously mentioned the notion of having a DROPS forum in SEA region again, and we fully support that.

**IADC related**

Everybody is encouraged to push, pull, lure, seduce, sweet-talk etc etc colleagues and industry relationships to sign up for the upcoming

**IADC HSE Conference in Kuala Lumpur 22-23 March**

**Next meetings**

The next 2 meetings were agreed on.

***28 Apr. 2017 (Host is needed, and CHAIRMAN SUGGESTIONS)***

***23 June***

We will continue with the combination of face to face and the option to dial in.

**Closing**

The meeting was closed off by thanking participants for their input.

Until next time

Stay safe

Bo D. Johansen  
HSE Committee Chairman
